

MINING INVESTMENTS ATTRACT ATTENTION OF CAPITALISTS

"I can see a great difference in the attitude of the general public toward mining," said Leison Ballet in speaking of his recent trip which took him through 22 states. "Throughout the middle west and eastern part of the United States, the doctor, lawyer, merchant, farmer and banker, are all willing to talk about mines. In cities where I was known, I had bankers send for me to ask questions about mining. In other places, friends of mine, would take me and introduce me to bankers who wanted to get some line of information. In former years, they would dismiss a mining man with a shrug of the shoulders and say, 'I have no time to talk about it—I'm not interested in it.'"

"All this is changed,—now they want to talk about it, and ask about the money question, and the high price of metals, and how much it costs them, and why the costs is now so high, etc. I was working in an architects office one day, designing the elevator equipment, upon a patent of my own, for a \$2,000,000 eighteen story office building, when the president of the corporation that is building it, came in. He and the architect were in conversation, over the high price of all building materials, which averaged 40 per cent higher than the same materials a few years ago."

"Mr. G——" the president, asked, "how do you account for it?" and of course there is but one answer possible, supply and demand, which was the answer I gave him."

"Why don't you fellows spend \$2,000,000 in the work of producing metals for building, instead of spending \$2,000,000 in the work of using up that amount of material that has already been produced?" I asked. He admitted that there was some merit in the suggestion, and said, "When I was trying to raise capital for this building company I ran across lots of financiers who, refused to join with me in the building, because building material is so high, and made the excuse that it was no time to build. I asked them if they thought the price would be lower after a while, and they said, 'No I don't think it will—there is too much demand for everything now day.' He further said that he found men who had invested in iron, copper, silver, gold and lead mines without

number, and used the expression, 'I didn't know there were so many mines in the world till I began raising finances for this building.' This all goes to show, the attitude of the eastern people toward mining as a business, or the business of production, instead of destruction."

"Here in Tonopah we are primarily interested in silver production and locally we want to know, how it will advance, and how far it will go and how soon. Nobody knows. These changes are brought about by conditions. Everything is increasing in price, except gold—that of course decreases as other things advance—because \$5 in gold will purchase less of other commodities, hence you can word the statement, that gold is declining, or that other things are advancing, and reach the same result. Take your choice. When stoves, farm implements, wire and sheet metal, machinery of all kinds, bolts, nails, track steel, building materials and labors increase, it makes a condition that will DEMAND SOME MEDIUM WITH WHICH TO MEET THE INCREASED PRICES. Gold in decline, cannot reach the point of absorbing all this increase in cost."

"Bear in mind that the various increases are more than double in many instances. Our gold medium of exchange, covered nicely the business of the country under the old conditions, but it is reasonable to suppose that the same gold will cover the business which is much larger, with double expense and double costs? The country is like a business enterprise, that wants to enlarge and needs capital. If the country needs capital, and if the world needs capital, to increase its business, where will it come from when the world already has all the capital that there is? Get that?"

"In other words they must make it out of some metal, more plentiful than gold and establish a definite basis of parity—SILVER. Carranza, when he needed more capital, commandeered a printing press and printed it—but it sold freely at 2 cents on the dollar because it had no backing UNTIL WILSON RECOGNIZED IT—and then it rose to 14 cents. What made it rise? RECOGNITION. When the world RECOGNIZES silver, it will rise. And from this analysis it would seem, that silver must be recognized sooner or later, else there will be no medium of absorbing the increased costs of other commodities."

"This is analysis—not prophecy. Logic applied to economics and not hopes of better times."

NON COMBATANTS MUST GO TO FRONT

MEN MADE TO DIG WHEN THEY OBJECT TO BEARING ARMS

(By Associated Press.)

BRITISH HEADQUARTERS IN FRANCE, June 6.—Unique among all the variegated units of the armies on the continent is the British non-combatant corps—the conscientious objectors, who do not want to fight and who are not expected to fight. Not fear but conscience is their reason for being excused.

In England, where individual rights are so strongly recognized, the Quaker is not required to bear arms because it is against his religious scruples.

When compulsion was applied, another class arose. They said they had conscientious scruples against the taking of life. If they would not fight then they must work, the government decided. Where a man who enters the army under normal conditions must drill for many months before he is sent to the front, the conscientious objector is given a few days drill, put in khaki, and sent to France at once. There he wields the spade instead of the rifle.

"There are the N. C. C.'s doing their bit," said their commander, an officer with a strip of colors on his breast, who had been in several campaigns and was so badly wounded in this war that he was hardly fit for active service. "They get the same pay as the men in the trenches and the same rations, with the extra allowance of meat which is given to the laborer's corps."

OVERHEATING OFTEN ATTRIBUTES TO FAULTY IGNITION

A pamphlet just issued by the Standard Oil company, entitled "Engine Overheating, Mechanical Bulletin No. 3," throws considerable light on the problem of overheating of automobile motors. This bulletin says, in part:

"One of the common causes of overheating is due to ignition. A late spark overheats the motor; the charge is ignited after the piston has started downward on the power stroke; consequently the hot gases are not expelled from the cylinder before the second charge is fired. This will continue until the cylinders become so hot that pre-ignition will take place. That is, the gas will ignite before the piston has reached the correct point, resulting in what is known as a 'spark knock.'"

"By advancing the spark lever on the quadrant, the mixture is ignited before the piston has reached top center, so that when the piston does reach the center and starts down, the expansion of the gases is complete, and they are exhausted at a comparatively low temperature."

"Missing of one or more cylinders has a tendency to overheat the motor, as the fresh gas is taken into the missing cylinder and ignited by the outgoing charge from the working cylinder, which causes muffler explosions and back pressure on the cylinders which are working."

"The right kind of lubricating oil is a great help in keeping the motor cool, and many of the leading automobile engineers and motor experts say that oil made from western asphalt-base crude has less tendency to 'break down' under cylinder heat than oil made from other crudes, and is, therefore a more efficient aid in keeping the motor cool."

H. A. DARMS of Coaldale was a passenger this morning for his mine.
